Powder Coating: A Durable, Eco-Conscious Finish

Powder coating is an eco friendly efficient method to apply a hard wearing, weatherproof surface finish to our products. This advanced process involves electrostatically applying a free-flowing polyester powder, which is then oven-cured to create an exceptionally hard, uniform finish. Available in a wide range of RAL and BS standard colours, our powder coating delivers both aesthetic appeal and superior protection.

- ✓ Enhanced Corrosion Resistance – gives addition corrosion protection to the galvanised castings
- ✓ Colour Stability – Maintains vibrant appearance long-term
- ✓ Exceptional Weather Durability – Withstands harsh environmental conditions
- ✓ Efficient Material Usage – Electrostatic application minimizes waste
- ✓ Environmentally Responsible – Virtually solvent-free, with negligible VOC emissions compared to conventional liquid paints

*Colours shown above are our standard colours, other colours are available on request.
Colours shown are approximate and might not be exact.*
